EDUCATION

University of Bristol

MSc Scientific Computing with Data Science

Focal Areas: Software development for research, Data Science, Machine Learning

Bristol, United Kingdom

Sep 2023- Nov 2024

Pass with Merit

SKILLS

Programming Languages:

Python, C/C++, C#, Bash, JavaScript, HTML, CSS, SQL, TypeScript

Tools/Techniques:

GSAP, Git, Next.js, React.js, Node.js, Express.js, MongoDB, Prisma, Flask, Docker, PyTest

Data Science and ML:

Pandas, Matplotlib, Scikit-Learn, PyTorch, TensorFlow, Predictive Modelling, Statistical Analysis

WORK EXPERIENCE

GloNeuro

Full Stack Engineer | AI/ML Developer

Feb 2025 –Current

- Plan and develop full-stack features using React/Next.js (Vite) and Node.js to enhance user engagement across GloNeuro's education suite.
- Design and deploy Flask-based APIs to serve machine learning models, aiming to deliver personalized content and increase user retention.
- Build scalable RESTful APIs and integrate MongoDB and SQL databases to support efficient delivery of tens of thousands of articles and podcast episodes.
- Set up integration with WordPress API to fetch backend content in real time, allowing ongoing content uploads via CMS while maintaining a scalable, modern frontend experience.
- Automate CI/CD pipelines using GitHub Actions to streamline deployments, reduce downtime, and eliminate manual errors.
- Optimise application security and performance by implementing JWT-based authentication and server-side rendering enhancements.
- Collaborate with multidisciplinary teams to launch new features for NeuroFlix, AxonPods, and NeuroSphere, targeting increased engagement from thousands of monthly active users.

GloNeuro

Researcher, Writer

Jan 2022 – Dec 2023

- Synthesized complex neuroscience concepts, debunked sleep myths, and analysed studies, boosting publication acceptance by 20%, reader engagement by 30%, and citations by 25%.

Jax Foundation

National Volunteer

Aug 2022 - Oct 2022

- Created personalized lesson plans, used innovative teaching methods, and collaborated with local organizations to improve academic performance by 15% and provide educational resources to underserved communities.

PROJECTS

SkyVault – Secure Cloud File Manager

Remote

[Link to Project](#)

- Built a full-stack file management web app using Node.js, Express, and MongoDB with JWT-based user authentication.
- Integrated Filebase for S3-compatible cloud storage and enabled upload, view, download, and delete operations.
- Designed a drag-and-drop interface with TailwindCSS and Flowbite, allowing seamless uploads with real-time feedback.

Discovery of new materials for solar cells using ML (group project)

Clifton, Bristol

[Link to ePortfolio](#)

Sep 2023 – Apr 2024

- Led a team to develop a Machine Learning model to predict solar cell materials with 71% accuracy and a 0.615 F1-score.
- Deployed the web application using Flask on the backend, with hosting via Render and version control through GitHub.
- Developed a responsive frontend using HTML, CSS, JavaScript, and Bootstrap, enhancing user experience.

ATLAS cloud analysis

Clifton, Bristol

[Link to Project](#)

Mar 2024 – Apr 2024

- Designed and implemented Docker containers for CERN Atlas Experiment, reducing data processing time by 50% and enabling consistent development environments.
- Utilised RabbitMQ for real-time data transmission and Docker Swarm for scalable deployment, improving resource utilisation by 40%.
- Automated the workflow with timestamped plotting and data saving features, enhancing analysis accuracy by 30% and system reliability through continuous integration practices.
